MARCH 2026

Annual Water Quality and CCR Info

Each year water utilities are required to issue a CCR (Consumer Confidence Report) to all customers. Reports must be sent to customers by July 1st but we aim to have them available by April.

What is a CCR you ask? It's an annual drinking water quality report that provides customers with information about their local drinking water. Keep an eye on your bill's messages to see the link you can follow to our most recent and years past CCR's.

Don't have your bill? Just visit our website at springfieldwater.org or lebanonwaterworks.com. The most recent CCR is available on the home page.

FUN FACT!

Springfield Water is a surface water system. This means we get our raw, untreated water from Willisburg Lake. Lebanon Water treats surface water as well, coming from the Rolling Fork River and the Fagan Branch Reservoir. In the state of Kentucky, over 3 million people get their water from a surface water source.

What info can be found in the CCR?

- The source of the drinking water
- Regulated contaminants found in the local drinking water
- The potential health effects of any contaminant detected in violation of an EPA health standard
- Information on nitrate or arsenic in areas where these contaminants may be a concern
- A statement for vulnerable populations about avoiding Cryptosporidium
- A section containing information about lead and service line inventory info was added this year

You can also download the report by scanning the respective QR Code below:
